

RPM 3

RPM® is a powerful, integrated research protocol management solution, uniquely focused on the needs of facilities managers and principal investigators, that provides IACUC, animal, facilities, and grant account management in a cost-effective and IT-friendly environment.

General Features

- Multi-platform (Windows/MacOS/iOS), multi-user, client/server software architecture.
- Support for up to 250 concurrent users.
- Integrated system backup schemes.
- Highly intuitive user interface and navigation.
- Over 40 reports in print and PDF formats. Print and export data from every system table.
- Document management tools for IACUC activities, animal care, and facilities management.
- Comprehensive implementation and ongoing support services.

Major New Features in RPM 3

General System Enhancements – RPM 3 features over 100 new features including a faster, more scalable database engine with support for more concurrent users and better WAN performance. RPM 3 has been updated with better data querying mechanisms, enhanced navigation tools, larger type size, data entry fields and screens, and email notifications for a range of activities.

RPM Dashboard – The RPM Dashboard provides at-a-glance information on current census, order and services status, facilities management activities, treatment plans, and upcoming IACUC deadlines.

Activity Scheduler – RPM 3 provides scheduling tools that track all activities and deadlines on a date range, user, animal, protocol and facility level with scheduled email notification. Today's responsibilities are only a single click away.

IACUC/Protocol Management – RPM 3 adds multiple and default accounts per protocol, better support for designated reviews, support for annual and 3-year review cycles, an enhanced procedure library, and more complete personnel records.

Enhanced Animal Care History – RPM 3 adds support for multiple treatment plans per animal care history record and the integration of individual treatment plans into the RPM activity scheduler.

Facilities Management – RPM 3 features augmented animal population backloading, census and audit tools, and room and equipment inventory management. Track statuses of active animal populations, including treatment plans, BSL, and controlled food/water.

Controlled Substances – RPM 3 provides tools for recording receipt and distribution of controlled substance and reports for regulatory agencies, including administration of individual doses.

RPM Mobile – Animal and facilities management in RPM 3 goes mobile with the addition of RPM Mobile for iPad and iPad mini. Users can perform census and audits, query animal records, move animals, print cage cards, and enter facilities data, technical services and medical records.

Financial Management – RPM 3 allows multiple institutional accounts per protocol and order line items and multiple vendors per supply item or animal strain, plus it gives researchers the ability to submit multiple animal orders or multiple tech service requests for a group of animals within a single request. RPM 3 also offers enhanced tools for line item and charge management.

RPM 3 System Requirements

Client Workstation – Windows® 8.1/10/11 or MacOS® 10.15, 11; 12; FileMaker Pro 19 (included with RPM); Multi-core Intel Mac or PC or Apple Silicon-based Mac; 8 GB RAM or greater; Ethernet or WiFi 5 or 6. Compatible with Citrix® XenApp.

Mobile – iOS 15+; FileMaker Go 19; Apple iPad mini 6; Zebra QLn320 printer; Socket Mobile scanner.

Server – Windows Server 2016/2019 or Ubuntu Linux LTS 18.04; FileMaker Server 19.4+; 16 GB RAM or greater; RAID 5 configuration preferred; 1000BT network interface card. Compatible with Citrix® XenApp 7.16+ and VMware® virtual server environments and FileMaker Cloud 2.19 and AWS cloud services.

Licensing and Support

RPM is available in a multi-user client/server configuration for maximum performance and security. A range of licensing and support options is available. Contact us for complete pricing and support options.
